Reasons for Allowance

22. The following is an examiner's statement of reasons for allowance per MPEP 1302

23. The claims in the application are deemed to be directed to a non-obvious improvement over Solomon (US patent number 5009777).

24. Claim 1 is directed to a double chamber double acting pressure intensifier having low and high pressure pistons. The pressure amplifier also includes a changeover valve in the low pressure piston which is operated by a spring loaded locking member. The

spring loaded locking mechanism in turn is operated by the low pressure piston which in turn operates (compresses) another impulse spring. The impulse spring and series of mechanical stops work together to release the locking mechanism and by the movement of the changeover valve the high and low pressure pistons will be moved .Solomon teaches a similar pressure intensifier device but operate in a uni directional way only (because of the spring resetting requirement) and also has three chambers (as opposed to two chambers).Most importantly the principle of operation of Solomon's amplifier differs from applicant's invention in that Solomon's amplifier solely depend on differential pressure to operate while applicant's invention is directed to the combined use of variety of springs associated with locking mechanism and a changeover valve . Thus In the examiner's opinion, it would not have been obvious to a person of ordinary skill in the art first to modify the uni directional acting three chamber pressure intensifier of Solomon to a double chamber ,double acting pressure intensifier that is operated by variety of springs and changeover valve.

Conclusion

24. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
